Celebrating its 100th birthday, the Marston Water Tower was built in 1897 and replaced the water wagons and windmills used for water distribution at that time. Designed by Anson Marston, the College of Engineering's first dean, the water tower was the first steel water tower built west of the Mississippi River. It is named on the National Register of Historic Places.

Data Network Information

The Iowa State University Data Network provides connectivity between computers, terminals, and local area networks throughout campus. This gives users the ability to access any machine on the data network with the appropriate software.

Connecting to Campus Inbound Modems

The inbound modems are connected to a terminal server that provides direct access to the Ethernet network. The modems support speeds from 300 bps to 14.4 kpbs and MNP5 and LAPM data compression. To access these modems, dial:

268-enet
(268-3638)

After your modem's "connected" message appears a menu will be presented.

Connecting to Campus Outbound Modems

Using the outbound modem pools, callers may connect to off-campus systems reachable by modem. Both modem pools are Hayes-compatible and support 2400- and 9600-bps connections, with speed setting controlled automatically. The pool on the terminal server also supports 14.4 kbps connection. Additional features such as auto-reliable mode and data compression are activated automatically if the answering modem supports them.

To use the outbound modems:

From ISN:

At the "DIAL" prompt:

TYPE modem
PRESS <RETURN>
When the campus network replies with "ANSWERED", the terminal is connected to an outbound modem.
TYPE ATZ
PRESS <RETURN> to reset the modem to its default settings. When "OK" appears on the screen, you are ready to call out from the network.

From Ethernet:

Telnet to modem.iastate.edu. When the connection has been established, you are connected to an outbound modem.

PRESS <RETURN>

The "W" tells the modem to wait for the dial tone before dialing your authorization code.

When the modem connects to the remote system, "CONNECT" (speed) (mode) is displayed, where (speed) indicates the baud rate, and (mode) indicates special features such as RELIABLE or COMPRESSED.

Press <RETURN> a few times to get a login prompt; then log in as usual. When you finish, follow appropriate logout procedures; then hang up from the modem by entering the disconnect sequence (<BREAK><BREAK>).
